

MAR History Report

1. The menu option to MAR History is found under the PRINT Menu option

2. A prompt window is available to give the user options for controlling the output of the *MAR History* report.

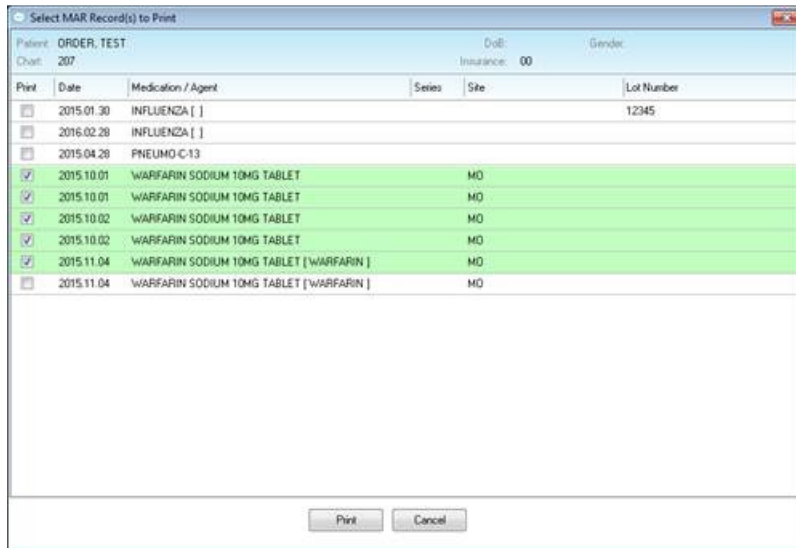

How it works:

Administration Date Range: If the user chooses to enter a from and to date, the report will be limited to records contained with those dates. If the dates are left blank, the report will not be constrained by dates. This allows the user to focus a report for a specific data range.

Concept: If the user chooses to select a concept, the report will be limited to the records contained with concept's rules. If the concept field is left blank, the report will not be constrained by a concept – it will print all medications.

Select Records to Print...: gives the user the ability to be selective to what records to include in the printed report. A second prompt window will open allowing the user to select /choose specific medication records.

Note: the standard shift-click can be used to select multiple records.

Select ALL and CLEAR selection were not added, if you want to select all, use the previous window and leave all the parameters blank. If you want to select all and un-check other records, the SHIFT-CLICK option is a safer option to use.
