

Patient Registration (Practice Management)

This provides a list of patients who were registered within a specific date range. Choose between a detailed report, or a summary report. The *detailed report* provides patient name, age, date of registration, chart number, last contact date, service center, jurisdiction code, ref doctor and total visits (for jurisdiction code, service center and attending). The *summary report* only includes total visits for jurisdiction code, service center and attending.

This could be considered an annual (or even monthly) report to run, in order to see how many new patients your office has taken on in the last month/ year, along with how many visits those patients have had.
