

Wait/ Appt Duration (Practice Management – Access)

Sample Questions:

1. How long are patients waiting in the office before moving to the exam room?
2. How long are patients waiting in the exam room before being seen?
3. How long is a physician spending with a patient on average (compared to how long the appointment time is booked for)

Date Range:	Select a date range. The day of the selected range will be the day that the report uses to calculate the average (i.e., if Mondays are chosen the report will determine average time spent on appointments on Mondays)
Weeks Between Slices:	This is the number of weeks between days selected that the report will use to calculate the average. If the User selects 1, the report will use that day on EVERY week to calculate the average. However if the User selects 2, the report will calculate averages for that day every second week.
Visit Codes:	The user has the option to select visit codes they wish to exclude, for example to exclude all visit codes "C", being cancelled visits. Separate excluded codes with a comma.
Time Intervals:	Enter the specific time interval you wish to filter for; there are 6 types in MOIS: Arrival to Appointment: Calculates the time between when the patient arrived, to their appointment. Appointment to Seen: Calculates the time between the patient's appointment to the time they are seen. Seen to Discharge: Calculates the time between when the patient is seen to the time the patient is discharged.
